

PROGRAM 21

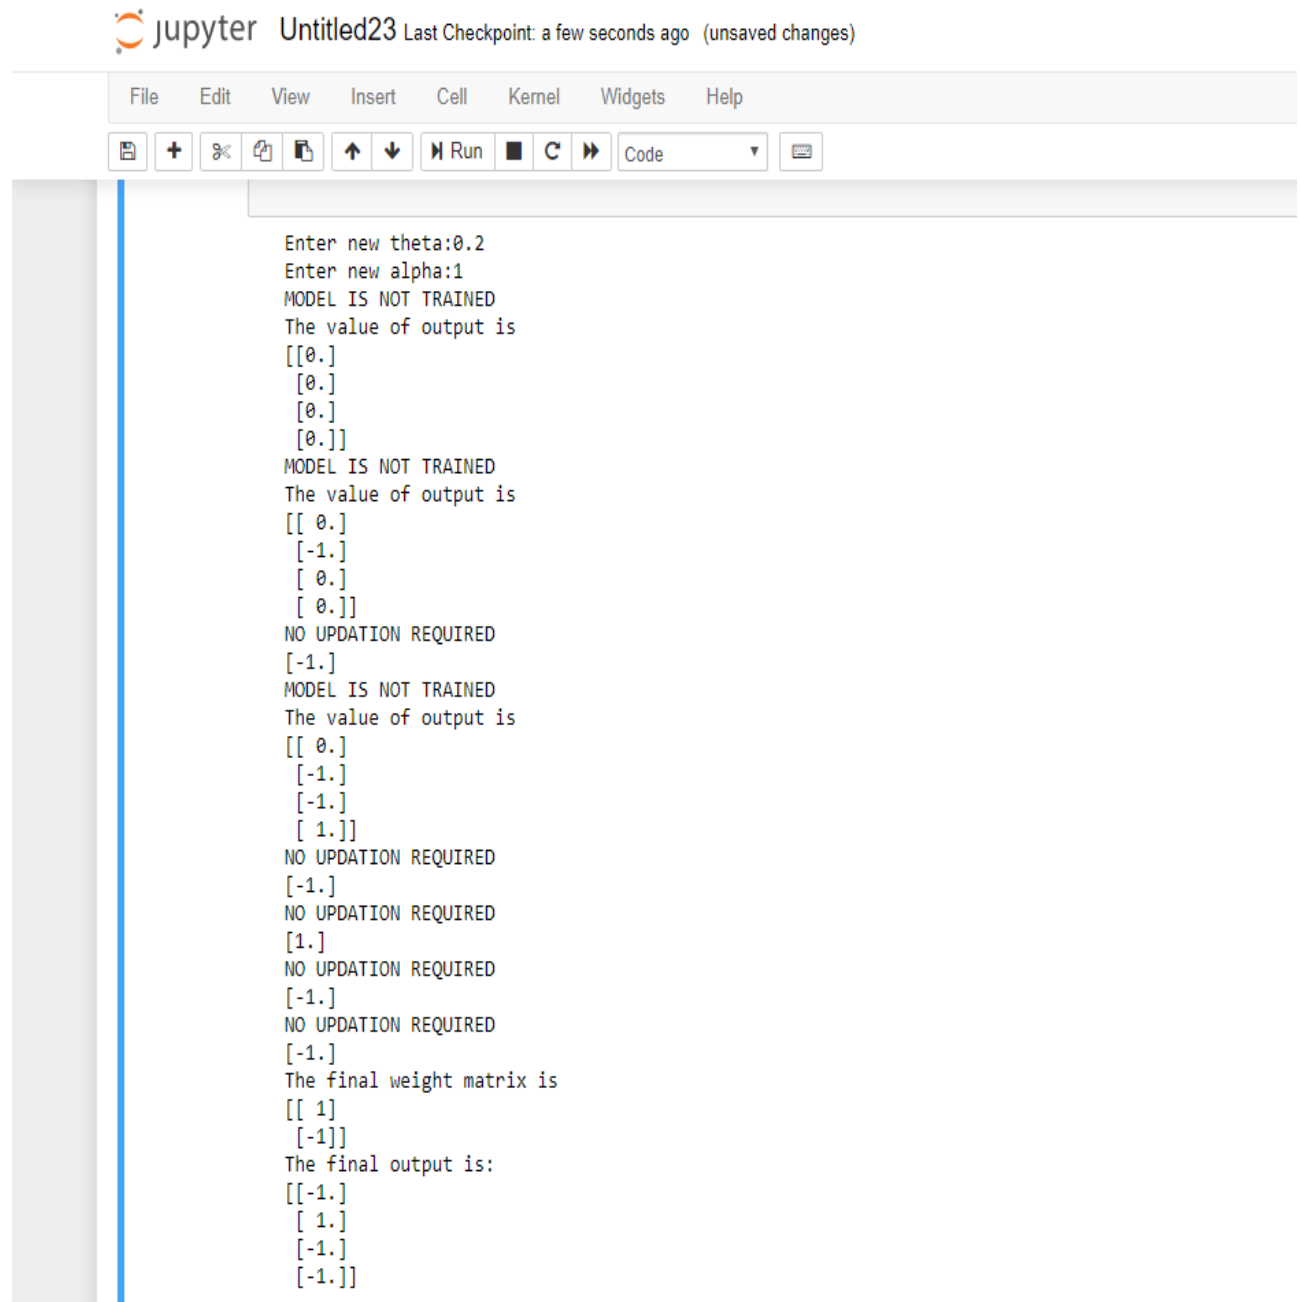

AIM: Write a program in Python to implement single layer perceptron for AND-NOT function.

CODE:

```
import numpy as np
x=np.array([[1,1],[1,-1],[-1,1],[-1,-1]])
t=np.array([[1],[1],[-1],[-1]])
w=np.array([[0],[0]])
b=0
theta=float(input("Enter new theta:"))
alpha=float(input("Enter new alpha:"))
yin=np.zeros(shape=(4,1))
y=np.zeros(shape=(4,1))
i=0
found=0
while(found==0):
    yin=x[i][0]*w[0]+x[i][1]*w[1]
    yin = yin+b
    if(yin>theta):
        y[i] = 1
    elif(yin<=theta and yin>=-theta):
        y[i]=0
    else:
        y[i]=-1
    if (y[i]==t[i]):
        print("NO UPDATION REQUIRED")
        print(y[i])
        if(i<3):
            i=i+1
        else:
            i=0
    else:
        print("MODEL IS NOT TRAINED")
        print("The value of output is")
        print(y)
        w[0]=w[0]+alpha*x[i][0]*t[i]
        w[1]=w[1]+alpha*x[i][1]*t[i]
        b = b+alpha*t[i]
        if(i<3):
            i=i+1
        else:
            i=0
    if(y==t).all():
        found=1
print("The final weight matrix is ")
print(w)
print("The final output is:")
print(y)
```

PROGRAM 21

OUTPUT:

The image shows a Jupyter Notebook interface. At the top, the title bar says "jupyter Untitled23" followed by "Last Checkpoint: a few seconds ago (unsaved changes)". Below the title bar is a menu bar with "File", "Edit", "View", "Insert", "Cell", "Kernel", "Widgets", and "Help". Under the menu bar is a toolbar with icons for saving, adding cells, undo, redo, copy, paste, run, and other functions. The main area of the notebook contains a single code cell. The code in the cell is as follows:

```
Enter new theta:0.2
Enter new alpha:1
MODEL IS NOT TRAINED
The value of output is
[[0.]
 [0.]
 [0.]
 [0.]]
MODEL IS NOT TRAINED
The value of output is
[[ 0.]
 [-1.]
 [ 0.]
 [ 0.]]
NO UPDATION REQUIRED
[-1.]
MODEL IS NOT TRAINED
The value of output is
[[ 0.]
 [-1.]
 [-1.]
 [ 1.]]
NO UPDATION REQUIRED
[-1.]
NO UPDATION REQUIRED
[1.]
NO UPDATION REQUIRED
[-1.]
NO UPDATION REQUIRED
[-1.]
The final weight matrix is
[[ 1]
 [-1]]
The final output is:
[[-1.]
 [ 1.]
 [-1.]
 [-1.]]
```
